# *Street and Field: Modular Camera Carrying System*

At Lowepro, we know how important each detail is to a photographer. Having the right camera, choosing the right lens, getting the right angle, picking the right moment - everything contributes to capturing the perfect image. That's why we designed Street and Field - a modular camera carrying system that gives you total flexibility, total accessibility and total freedom of choice. With Street and Field, you carry just what you need, just where you need it, as simple as that.

## Modular, for Maximum Flexibility

The modular components that comprise Lowepro's new Street and Field system fall into two main categories:

- Core components are the building blocks for the Street and Field system. They include two waistbelts and two harnesses that are designed to hold the various Street and Field equipment cases.
- Equipment cases are the individual pouches, bags and packs that hold your equipment. They attach securely to the core components with several quick and easy attachment methods.

## Comprehensive, to Meet Every Carrying Need

Because there are hundreds of variations for what you need to carry on your shoots, we've included a wide range of modular units to choose from—pieces that hold everything from point-and-shoot cameras to 600mm super telephotos, water bottles and press passes. And as your equipment needs grow and change, your Street & Field system can grow and change with you.

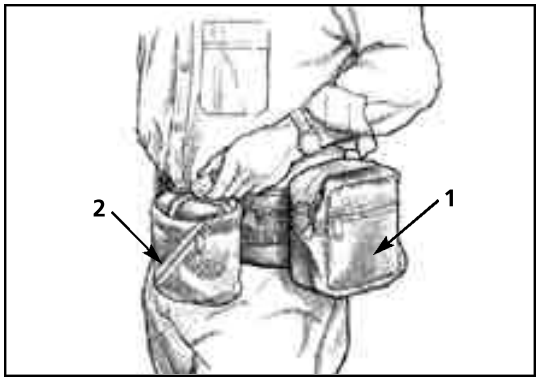
## Well Designed, for Total Accessibility

Having quick access to your gear is crucial for responding to changing conditions and opportunities. With Street & Field, you'll be able to wear your equipment where it is most practical - so it's immediately accessible for your shooting style.

## Constructed With Quality Materials, to Provide the Right Protection

Like all Lowepro products, Street and Field components are designed with the appropriate amount of protection, so you can work comfortably in a variety of conditions without having to worry about your gear. There's extra thick padding in places like the bottom of the Lens Trekker, to protect your prized telephoto lens. Lighter materials are used in less "impact critical" areas, to minimize weight and bulk. And many components contain a built-in All Weather Cover, so your valuable equipment will be protected against extreme weather conditions.

# *How You Can Build Your System:*

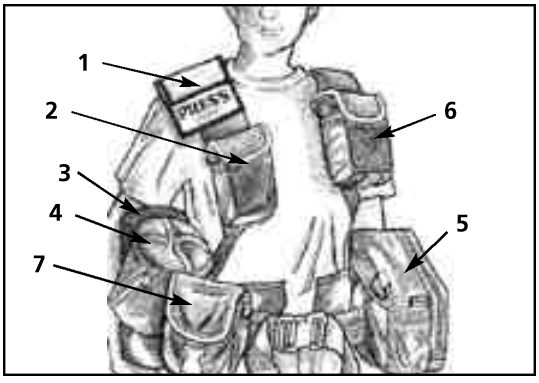


## Example 1: Going Light

You may only want to carry basics such as extra film, one or two lenses, a GPS or a point-and-shoot camera. Attach one or more of our 15 SlipLock cases - whatever meets your needs.

**Core component shown:**
- Deluxe Waistbelt

**Equipment cases shown:**
- 1 Film Organizer AW
- 2 Film Drop AW



## Example 2: Full Outfit

The combination of the Deluxe Waistbelt and Shoulder Harness gives you many options for carrying your gear.

**Core components shown:**
- Deluxe Waistbelt
- Shoulder Harness

**Equipment cases shown:**
- 1 ID Pocket
- 2 Pouch 10
- 3 Film Drop AW
- 4 Lens Case 3
- 5 Utility Case
- 6 Pouch 30
- 7 Pouch 50 AW
